# Business Process

## 1. User Content Personalization

Pada awalnya, ketika pengguna membuka aplikasi, sistem akan menampilkan konten umum seperti event populer, promo menarik, atau artikel terbaru. Namun, sistem juga memberikan ruang bagi pengguna untuk melakukan pencarian (Search) dengan memasukkan kata kunci (Keyword) tertentu, misalnya "festival musik" atau "workshop digital art".

Data pencarian ini akan dicatat oleh sistem melalui tabel Search, yang kemudian dikaitkan dengan profil pengguna (Customer). Berdasarkan kata kunci, riwayat pencarian, serta interaksi pengguna terhadap konten sebelumnya (Content dan InteractionType), sistem berbasis AI akan menganalisis minat pengguna. 1 Customer dapat melakukan banyak searching, sedangkan 1 searching hanya dapat dilakukan oleh 1 customer. 1 searching dapat mengakses banyak content, sedangkan 1 content hanya dapat diakses oleh 1 searching.

Hasil analisis ini membuat sistem dapat menampilkan konten yang lebih relevan dan personal, seperti rekomendasi event di sekitar lokasi pengguna, promo dari vendor yang sering dilihat, atau artikel sesuai ketertarikan pengguna. Dengan demikian, setiap pengguna akan memiliki tampilan konten yang unik sesuai preferensi mereka.

# Business Process

1

## 2. Order Creation

Setelah menemukan event atau experience yang menarik dari hasil personalisasi, pengguna dapat memilih untuk melakukan pemesanan (Order).

Sistem akan otomatis membuat pesanan dan mencatat data seperti tanggal order, event yang dipilih, jumlah tiket, dan total harga (subtotal).

Ketika pengguna melanjutkan proses pembayaran, mereka dapat memilih 3 metode pembayaran, seperti E-Wallet, Credit Card, Virtual Account.

## 3. Ticket Issuance

Setelah pembayaran diverifikasi, sistem secara otomatis menghasilkan tiket elektronik (E-Ticket) untuk pengguna.

Tiket ini berisi kode unik yang dapat digunakan untuk masuk ke event.

E-Ticket tersebut akan:

- Tersimpan di aplikasi pengguna, sehingga bisa diakses kapan saja.
- Dikirim ke email pengguna sebagai bukti transaksi resmi.

# Scope and Business Problems

1

## Business Problem

- Rekomendasi Kurang Personal - aplikasi kompetitor hanya menampilkan event populer, bukan sesuai minat user.
- Kurang Integrasi dengan Venue - data tiket kadang tidak sinkron dengan penyedia acara.

## Scope

- Dari searching content hingga ke pembelian tiket

## Business Rules

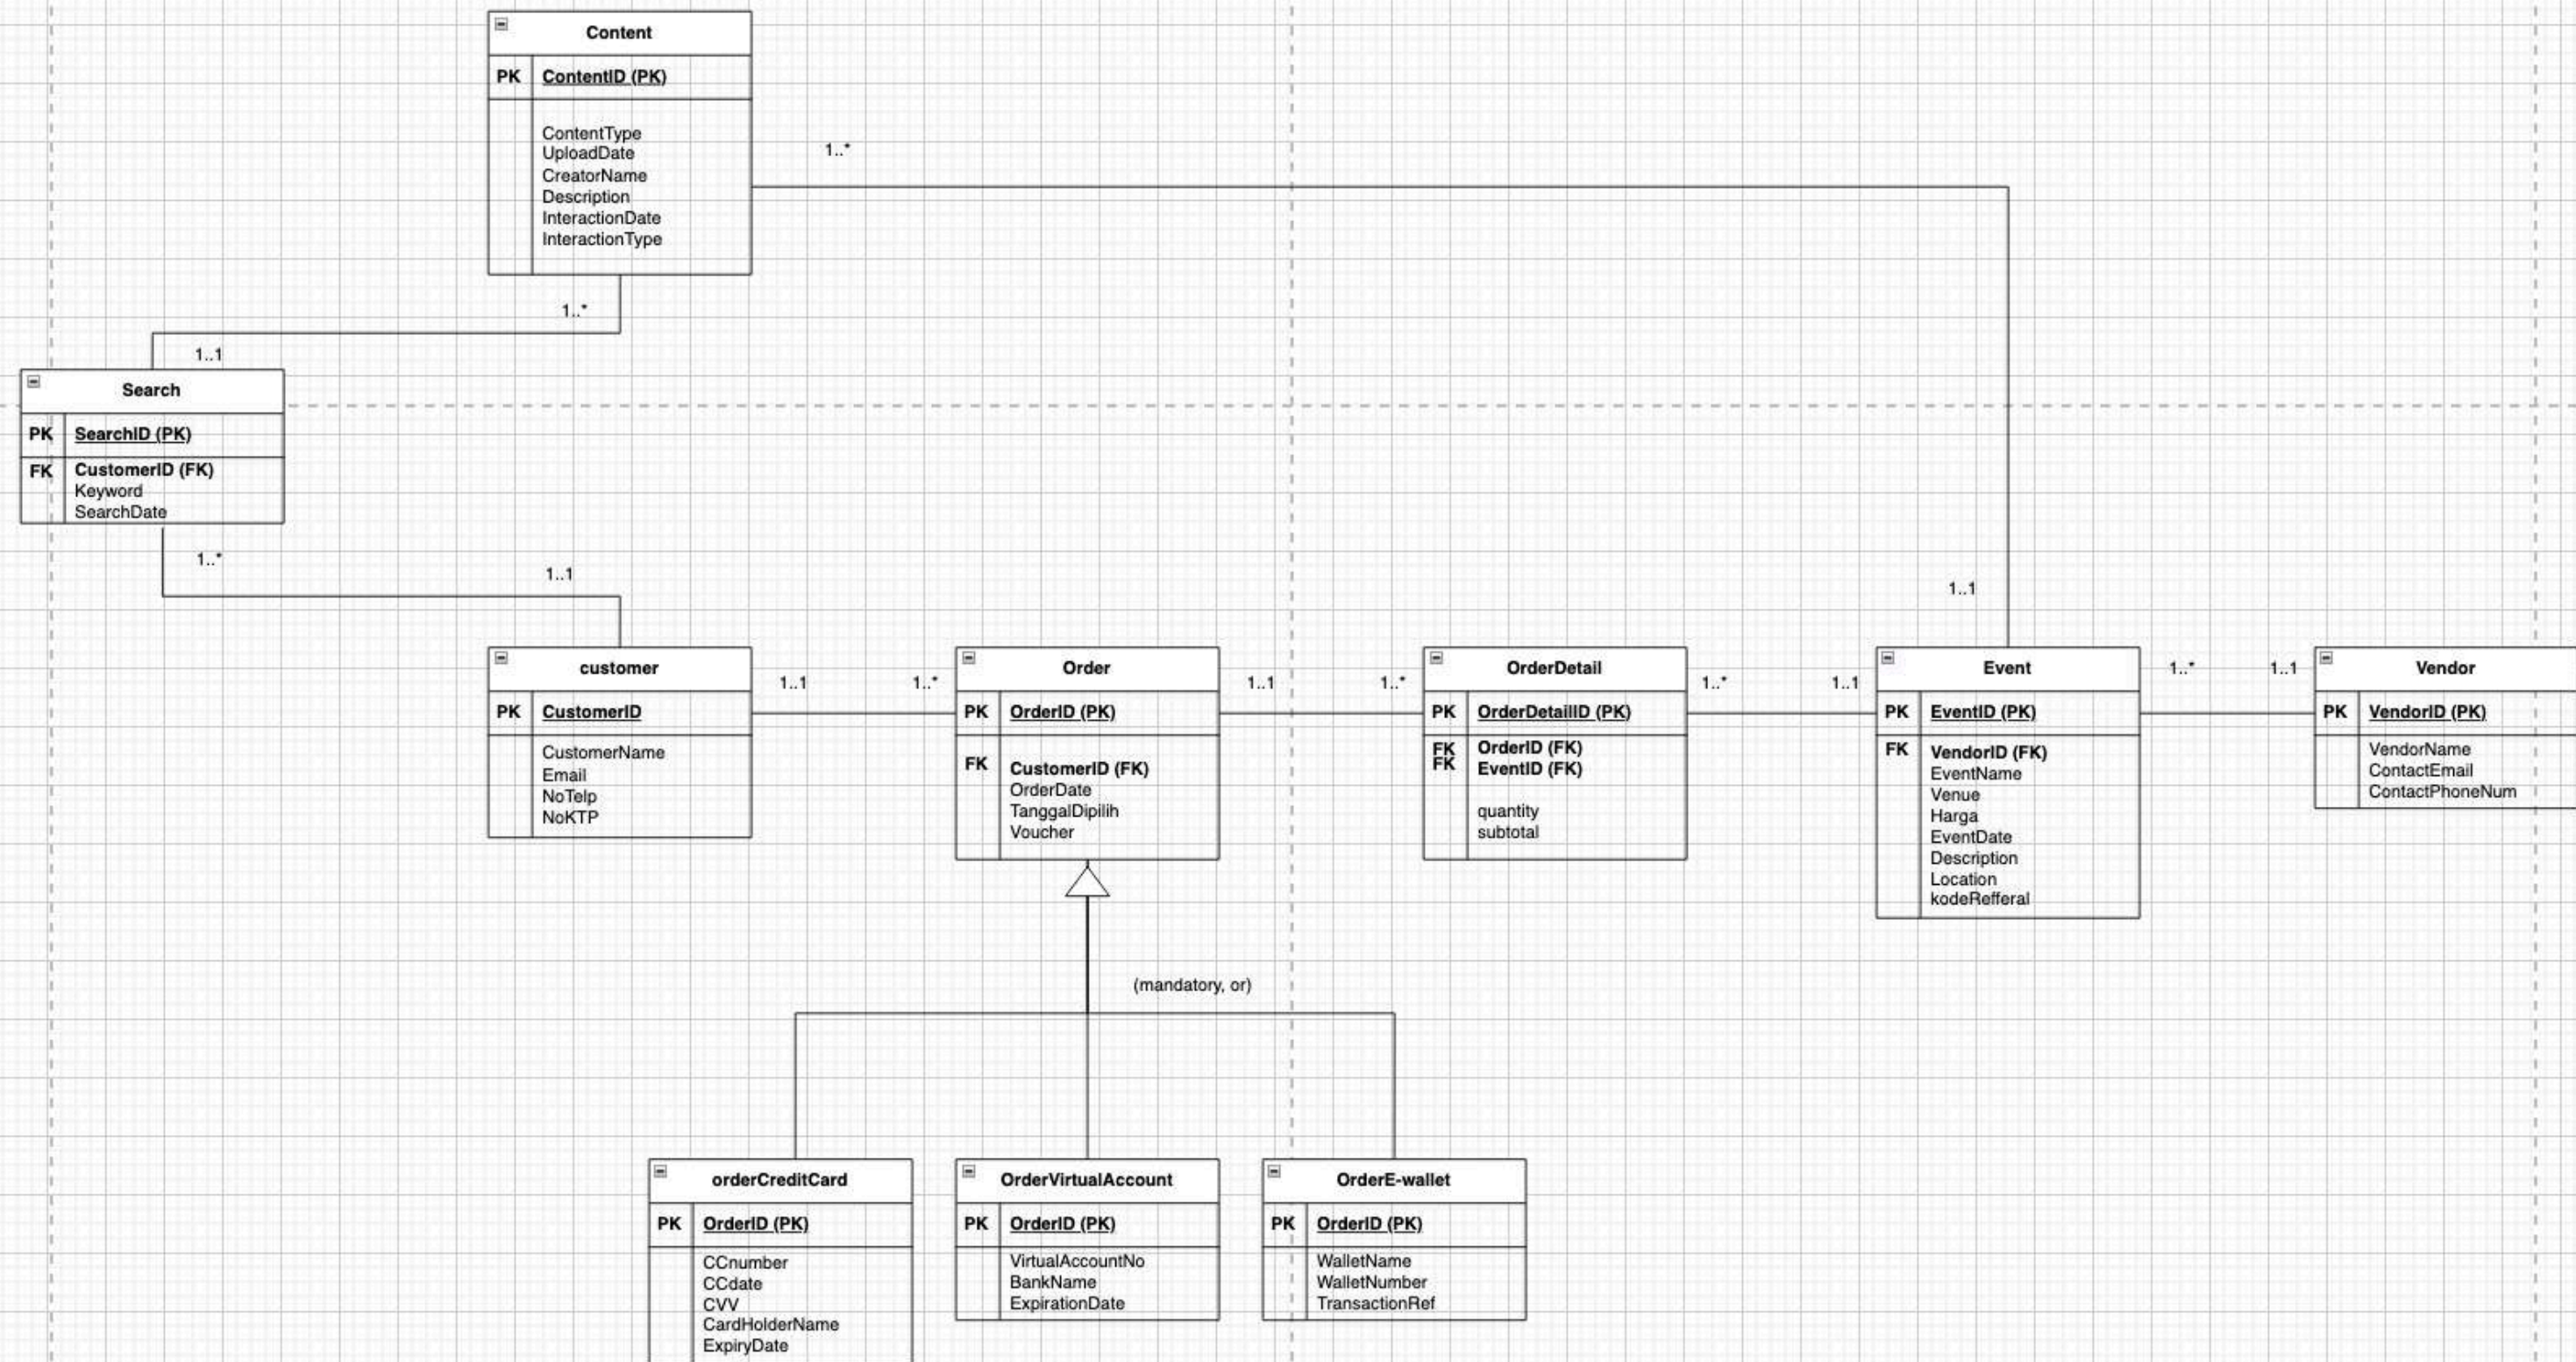

- 1 Customer bisa punya banyak order, sedangkan 1 order pasti dilakukan oleh 1 customer
- 1 Customer bisa melakukan banyak searching, sedangkan 1 searching dilakukan oleh 1 customer
- 1 searching bisa mengakses banyak content, sedangkan 1 content hanya diakses oleh 1 searching
- 1 order bisa mempunyai banyak order detail, sedangkan 1 order detail hanya dipunyai oleh 1 order
- 1 event bisa punya banyak order detail, sedangkan 1 order detail hanya dipunyai 1 event
- 1 vendor punya banyak event, sedangkan 1 event hanya dipunyai oleh 1 vendor

# ***INOVASI YANG AKAN DILAKUKAN***

## **AI Recommendation system**

- AI membaca data pengguna (searching dan interaksi) yang awalnya hanya berdasarkan riwayat pembelian sebelumnya. personalized = sesuai minat, location-based = event populer di sekitar pengguna.

**Rp175.500**

**E-Ticket**  
E-Ticket is active until 17 Desember 2025.

A stylized illustration of a city at night. The sky is a deep blue, featuring a large, bright white full moon in the upper right corner. Several black silhouettes of birds are shown in flight across the sky. Below the sky, a cityscape is depicted with various buildings. Some buildings have windows that are lit up with a warm yellow light, contrasting with the cool blue tones of the night. In the foreground, a building with a dark, textured roof is visible, with a few lit windows. A utility pole with several wires is positioned on the left side of the frame. The overall style is reminiscent of a digital painting or a graphic novel illustration.
